carcinoma cell line. Non-naturally occuring SCF and C-terminally carcinoma cell line. Non-naturally occuring SCF and C-terminally curroated polypeptides, having amino acid sequences sufficiently compared to naturally occuring SCF stimulate growth of printitive progenitors such as haematopoietic progenitor cells, neural stem cells and primordial germ stem cells. The peptides can be used in a composition of contracting leucopenia, anaemia or thrombocytoponia, for enhancing engrathment of bone marrow during transplantation or for bone marrow aplasia or recovery after chemotherapy or radiation-induced bone marrow aplasia or myelosuppression. They can also be used for treating neoplasia, nerve damage, infertlilty, intestinal damage or myelosupointerion or for bone may be raised against the peptides for use in detection or hibbodies may be raised against the peptides for use in detection or antibodies may be raised against the peptides for use in detection or and severe combined immunodeficiency (SCID) states alone or in combination with other factors such as IL-7. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

The present sequence representing human SCF (stem cell factor) protein is isolated from the 5637 bladder carcinoma cell line. The present invention crlates to novel stem cell factors (AA002453-AA002466) and the polymucleotides encoding them. SCF stimulate primitive progenitor cells including early haematopoietic progenitor cells. The invention also describes SCF peptides (AA00462-AA002481) and the oligonucleotides (AA0040117) used in the isolation of human and rat SCF sequences. The polymucleotide encoding SCF is useful for producing SCF and useful in CC apen therapy. It is useful for treating disorders involving blood cells such as myelofibrosis, metastatic carcinoma, acute leukaemia, multiple myeloma, Hoddkin's disease, lymphoma, Gaucher's disease, anaemia, congestive splenomegaly, Kala azar, sarcoidosis, military tuberculosis, congestive splenomegaly, pyridoxine deficiency, and hypopigmentation cand folic acid deficiency, pyridoxine deficiency, and hypopigmentation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 MDVLPSHCWISEMVVQLSDSLTDLLDKFSNISEGLSNYSIIDKLVNIVDDLVECVKENSS 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a method for enhancing (B) the efficiency of transfer of a polynucleotide (I) into a target mammalian cell (II) in vitro, comprising exposing (II) that expresses a stem cell factor (SCP) receptor to a biologically active SCP, its analogue or fragment, which induces cell proliferation, and introducing (I) to (II) in vitro. Exposure of SCF to (II) results in increased uptake of (I) into the cell. The method is useful for enhancing the efficiency of the transfer of a polynucleotide into a target mammalian cell in vitro. The method is useful in gene therapy techniques. Addition to Addition of the present AAB98390 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      KDLKKSPKSPEPRLFTPEEFFRIFNRSIDAFKDFVVASETSDCVVSSTLSPEKGKAKNPP 180

These are capable of stimulating the growth of early haematopoietic progenitor cells, neural stem cells and primordial germ stem cells. The sequences are useful in the treatment of leukaemias, haematopoietic disorders, aplastic anaemia, paroxysmal neuroglobinuria, malaria, pigmentation disorders, neurological and intestinal damage, infertility, AIDS and severe combined immunodeficiency (SCID). The present sequence is an SCF described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated non-human mammalian stem cell factor polypeptide stimulating growth of early hematopoietic progenitor cells, useful for treating aplastic anemia, lymphoma, Letterer-Siwe disease, Kala azar, sarcoidosis.
                                                                                                                                                                                                                                      Human; rat; mammal; stem cell factor; SCF; cell growth stimulation; gene therapy; haematopoietic disorder; aplastic anaemia; leukaemia; neurological damage; intestinal damage; infertility; AIDS; SCID; severe combined immunodeficiency.

isolated from the 5637 bladder carcinoma cell line. The present invention relates to novel stem cell factors (AAB73561-AAB73568, AAB73571-AAB73576) and the polymucleotides encoding them. SCF stimulate primitive progenitor cells including early haematopoietic progenitor cells. The invention also describes SCF peptides (AAB73578-AAB73597) and the oligonucleotides (AAH23895) used in the isolation of human and rat SCF sequences. The polymucleotide encoding SCF is useful for producing SCF and useful in gene therapy. It is useful for treating disorders involving blood cells such as myelofibrosis, metastatic carcinoma, acute leukaemia, multiple myeloma, Rodgkin's disease, lymphoma, Gaucher's disease, anaemia, congestive splenomegaly, Kala azar, sarcoidosis, military tuberculosis, disseminated fungus disease, Pulminating septicaemia, malaria, vitamin hypopigmentation disorders such as piebaldism and vitiligo
                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                              180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence representing human SCF (stem cell factor) protein is isolated from the 5637 bladder carcinoma cell line. The present invention relates to novel stem cell factors (AAU02761-AAU02775, AAU02779, AAU02797) and the polymuclectides encoding them. SCF stimulate primitive progenitor cells including early haematopoietic progenitor cells. The invention also describes SCF speptides (AAU027794) and the coligonuclectides (AAS04182-AAS0418) used in the isolation of human and rat SCF sequences. The polymuclectide encoding SCF is useful for treating carcinoma, acute leukaemia, multiple myeloma, Hodgkin's disease, archinoma, daucher's disease, anaemia, congestive splenomegaly, Kala azar, sarcidosis, military tuberculosis, disease, carcinoma, acute leukaemia, multiple myeloma, Hodgkin's disease, sarcidosis, military tuberculosis, disease, carcidosis, military tuberculosis, disease, carcidosis, military tuberculosis, disease, chiminating septicemia, malaria, vitamin Blz and folic acid deficiency, pyridoxine deficiency, and hypopigmentation disorders such as piebaldism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180

The present invention relates to novel non-naturally-occurring stem cell factor (SCF) polypeptides having an amino acid sequence sufficiently duplicative of that of naturally-occurring SCF to allow possession of haematopoietic biological activity of naturally occurring SCF. Sequences of the invention are useful for treating leucopaenia, thrombocytopaenia, anaemia and for enhancing bone marrow recovery in treatment of radiation, engraftment of bone marrow during transplantation in mammals and chemical or chemotherapeutic induced home marrow aplasia or myelosuppression. They are also useful for treating acquired immune deficiency in a human, nerve damage, nooplasia, infertility, myeloproliferative disorder, intestinal damage in a mammal. SCF sequences are useful for preparing blologically active polymer polypeptide adduct, for enhancing transfection of early

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents human stem cell factor (SCF). The cDNA encoding this sequence is isolated from the 5637 bladder carcinoma cell line. The sequence is described in an invention relating to novel stem cell factors, the polynucleotides encoding them and methods for producing the stem cell factors. The methods involve increasing the number of early haematopoietic progenitor cells in human peripheral blood by administering a haematopoietically effective human stem cell factor including myelofibrosis, myelosclerosis, osteopetrosis, metastatic carcinoma, acute leukaemia, multiple myeloma, Hodgkin's disease, carcinoma, acute leukaemia, multiple myeloma, Hodgkin's disease, humboma, Gaucher's disease, Niemann-Pick disease, refractory anaemia, malaria, vitamin B12 and folic acid deficiency, hypopigmentation disorders i.e. piebaldism and viral induced disorders, including AIDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    KOLKKSFKSPEPRLFTPEEFFRIFNRSIDAFKOFVVASETSDCVVSSTLSPEKGKAKNPP 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Increasing the number of early hematopoietic progenitor cells in the peripheral blood useful for the treatment of blood disorders including Hodgkin's disease comprises the administration of human stem cell factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MDVLPSHCWISEMVVQLSDSLTDLLDKFSNISEGLSNYSIIDKLVNIVDDLVECVKENSS 120

                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel stem cell factors (SCFB), polynucleotide sequences encoding the SCFB, and methods of producing them. SCFB are involved in the blood-forming (haematopoietic) system in mammals, particularly humans. The method of the invention is useful for the production of human SCP. The stem cell factors are useful to treat disorders involving blood cells e.g. metastatic carcinoma, acute leukaemia, multiple myeloma, Hodgkin's disease, lymphoma, refractory erythroblastic anaemia, miliary tuberculosis, disseminated fungus disease, malaria, and vitiligo. The present sequence represents human SCF protein isolated from the 5637 bladder carcinoma cell line
                                                                                                                                                                                            Production of a human stem cell factor (SCP) polypeptide for treating disorders involving blood cells, such as leukemia, comprises culturing mammalian cells comprising non-human SCF promoter DNA linked to DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 MKKTQTWILTCIYLQLLLENPLVKTEGICRNRVTNNVKDVTKLVANLPKDYMITLKYVPG

ADP99333
             The invention relates to stem cell factor (SCF) polypeptides with haematopoietic activity and the polymucleotides encoding them. The polypeptides are used for treating infertility, intestinal damage, myeloproliferative disorders, leucopenia, thrombocytopenia or anaemia, for improving engraftment of bone marrow transplants, for enhancing bone marrow recovery after radiotherapy or chemotherapy and in treatment of improving engraftment of bone marrow transplants, for enhancing bone arcinoma, leukaemia and miliary tuberculosis. The SCF polypeptides are carcinoma, leukaemia and miliary tuberculosis. The SCF polypeptides are also used to expand haematopoietic progenitor cells for transplantation and to prepare such cells for transfection with a gene. The SCF polypeptides and also as probes for mapping of the SCF gene, for polypeptides and also as probes for mapping of the SCF gene, for identifying SCF-related diseases and as a marker for neighbouring genes. Antibodies raised against the polypeptides are useful in diagnosis and to remove SCF from blood. This sequence represents an SCF polypeptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

Also included is a recombinant host cell transfermed or transferded with an expression construct comprising a vertebrate SCF polypeptide-encoding DNA operatively linked to a heterologous expression regulatory sequence, permitting the expression of the vertebrate SCF polypeptide in the host cell. Disclosed as new are rat and human nucleic acids encoding SCF, SCF proteins from a number of other mammals and recombinantly expressed SCF protein fragments. The DNA sequences are useful for effecting the large scale synthesis of SCF by a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Preparing a human stem cell factor (SCF) polypeptide, useful for treating hematopoletic disorders, e.g., aplastic anemia, comprises growing host cells transformed or transfected with DNA encoding a human SCF.
                                                                Human stem cell factor, SCF, protein (bladder cancer).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Zsebo KM, Bosselman RA, Suggs SV, Martin FH;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Protein
```

cc variety of recombinant techniques or for generating new and useful viral and circular plasmid DNA vectors, new and useful transformed and circular plasmid DNA vectors, new and useful transformed and transfected prokaryotic and eukaryotic host cells, and new and useful comethods for cultured growth of such host cells capable of expression of SCF and its related products. The DNA sequences are also useful as a protein synthesis, in genetic therapy in humans and other mammals, and cometin synthesis, in genetic therapy in humans and other mammals, and in developing transgenic mammalian species which may serve as eukaryotic in developing transgenic mammalian species which may serve as eukaryotic consetul for treating haematopoietic disorders, e.g., aplastic anaemia, consetul for treating haematopoietic disorders, e.g., aplastic anaemia, consecutions metastatic carcinoma, acute leukaemia, multiple myeloma, conterer-siwe disease, lymphoma, Gaucher's disease, Niemann-Pick disease, Letterer-Siwe disease, refractory erythroblastic anaemia, pick disease, congestive splenomegaly, Kala awar, sarcoidosis, primary splenic pancytopaenia, miliary tuberculosis, disseminated fungus disease, Congestive splenomegaly, Kala awar, sarcoidosis, primary splenic pancytopaenia, miliary tuberculosis, disseminated fungus disease, Confidence such as piebaldiam and vitiligo. The SCF are also useful for treating neurological damage, infertility states, intestinal damage cresulting from irradiation or chemotherapy, and AIDS. SCF is also descret sequence is a human SCF protein sequence (partial or full length).

```
This invention relates to a novel method of inhibiting or treating a tumour, metastasis or infectious lesion in a subject which comprises administrating into or near a site of a tumour or infectious lesion in a subject an antigen presenting cell and an immunostimulatory cytokine or a nucleic acid encoding the cytokine. The invention may be useful for the production of compounds with a cytostatic or vulnerary activity acting as timunomodulators. The method is useful in inhibiting or treating as timunomodulators. The method is useful in inhibiting or treating a cumour, metastasis or infectious lesion in a subject, where the size of the tumour, metastasis (where number is also decreased) or infectious certing is selected from metanoma, hepatoma, adenocarcinoma, colorectal cancer, basal cell cancer, read and neck cancer, renal cell cancer, pancreatic cancer, pulmonary cancer, cervical cancer, ovarian cancer and breast cancer, gastric cancer, prostrate.
                                                                                                                                                                                                                                                                                                       Inhibiting or treating a tumor, metastasis or infectious lesion comprises administering into or near site of a tumor or infectious lesion an antigen presenting cell and an immunostimulatory cytokine or a nucleic acid encoding the cytokine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MKKTQTWILTCIYLOLLLENPLVKTEGICRNRVTNNVKDVTKLVANLEKOYMITLKYVPG

The invention relates to a stem cell factor (SCP) such as non-naturally-
cocurring SCF having an amino acid sequence sufficiently duplicative of
that of naturally occurring SCF to allow possession of a haematopoietic
biological activity of naturally occurring stem cell factor, or naturally
cocurring SCF. Also included are an isolated DNA sequence for use in
securing SCF. Also included are an isolated DNA sequence for use in
securing SCF. Also included are an isolated DNA sequence for use in
caturally occurring SCF, a prokaryotic nost cell of non-
certansformed or transfected with the DNA, a polypeptide product of the
cxpression of the DNA in a prokaryotic or eukaryotic host cell, an
cypression of non-naturally occurring SCF, a DNA sequence coding for a
polypeptide fragment or polypeptide analogue of naturally-occurring stem
ccell factor, a biologically functional plasmid or viral DNA vector
including the DNA sequence above, a prokaryotic or eukaryotic host cell
citably transformed or transfected with the DNA, a polypeptide having part
cor all of amino acid sequence encoded by composite nucleic acid sequence
cof human SCF cDNA sequence obtained from HT1080
cfibrosarcoma cell line, or human SCF cDNA sequence obtained from 537 bladder
carcinoma cell line (and having one or more of in vitro biological
carcinoma cell line, or human SCF cDNA obtained from an antibody
specifically binding SCF. SCF. is useful for traating leukopaenia,
chrombocytopaenia, anaemia, and enhancing engraftment of bone marrow
during transplantation in a mammal. SCF is useful enhancing bone marrow
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel stem cell factor (SCF) such as non-naturally-occurring SCF or naturally occurring SCF, useful for treating leukopenia, thrombocytopenia, anemia, and enhancing engraftment of bone marrow during
                                                      Human, stem cell factor; SCF; haematopoietic;

bone marrow aplasia or myelosuppression which involves treating patients with therapeutically effective doses of SCF. SCF is useful for treating caquired immune deficiency, neoplasia, nerve damage, infertility, intestinal damage, and a myeloproliferative disorder. SCF is useful for treating carly haematopoletic progenitor cells with a gene which cransfecting early haematopoletic progenitor cells with SCF, and transfecting the cultured cells with a gene which cransfecting a gene to a mammal which involves culturing early cransfecting a gene to a mammal which involves culturing early cransfecting the cultured cells with a gene, and administering the cultured cell to the mammal. SCF is useful for treating various haematopoletic disorders, aplastic anaemia, complicible myelomia haematopoletic disorders, aplastic anaemia, myelofibrosis, myelomia haematopoletic disorders, aplastic anaemia, multiple myeloma, hodgkin's disease, lymphoma, gaucher's canaemia. SCF is useful for enhancing the efficiency of gene therapy, for enhancing haematopoletic recovery after acute blood loss. The present

The present invention relates to a method (MI) for stimulating proliferation of melanocyte cells in a human. (MI) involves administering CC proliferation of melanocyte cells in a human. (MI) involves administering CC that stimulates growth of melanocyte cells, and optionally a carrier, to the thuman. The SCF is covalently conjugated to a water soluble polymer CC e.g. polyethylene glycol. Also, the SCF is co-administered with one or more other cytokines. SCF is also able to stimulate the growth of printitive progenitors such as early hematopoietic progenitor cells that are capable of maturing to erythroid, megakaryccyte, granulocyte, come macrophage cells, and non-hematopoietic stem cells such as collerating bone marrow regeneration, and in augmenting T cell accelerating bone marrow regeneration, and in augmenting T cell production. (MI) is useful for treating stem cells disorders that are characterized by a reduction in functional marrow mass due to toxic, radiant or immunological injury. (MI) is useful in treating AIDS, confluction in functional marrow mass due to toxic, radiant or immunological injury. (MI) is useful in treating AIDS, well-intended proposition of disease, lymphoma, Gaucher's disease, Niemann Prick disease, congestive splenomegaly, Kalaazar, sarcoidosis, primary splenic pancytopenia, vitamin B12 and folic acid deficiency disease, pyridoxine deficiency disease, and hypopigmentation disorders such as confluence resulting from irradiation or chemotherapy, and stem cell myeloproliferative disorders such as chronic myelogenous leukemia, primary thromboocythemia and acute leukemia. (MI) is useful in expanding call myeloproliferative disorders such as chronic myelogones contranglantation, and in enhancing the efficacy of gene therapy. The present sequence was used to illustrate the invention. The call therapy the present sequence was used to illustrate the invention. The call was accompanied to the cape of the cape.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Stimulating proliferation of melanocyte cells in human, involves administering stem cell factor polypeptide or its biologically active fragments stimulating growth of melanocyte cells, and optionally carrier,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              coding sequence for this protein was obtained from the 5637 bladder carcinoma cell line.
